

DESCRIPTION OF THE ORTHOPEDIC UNIT

The orthopedic unit in the department of surgery at ALMC aims at treatment of your bones, joints, ligaments, tendons and muscles (musculoskeletal system). With over 10 years of existence at ALMC, its orthopedists have vast experience in bone deformities, infections, tumors, fractures and tendon injuries treatment. Specialized services offered include joint replacement/arthroplasty (total knee replacement/arthroplasty, both hemiarthroplasty and total hip replacement), arthroscopy (diagnostics and curative) and bone lengthening (bone transport).

We also offer excellent physiotherapy and rehabilitation services for both admitted and outpatient clients
